DiagNose HQ in France

DiagNose, an International Expert on Explosives & Narcotics Detection Dogs

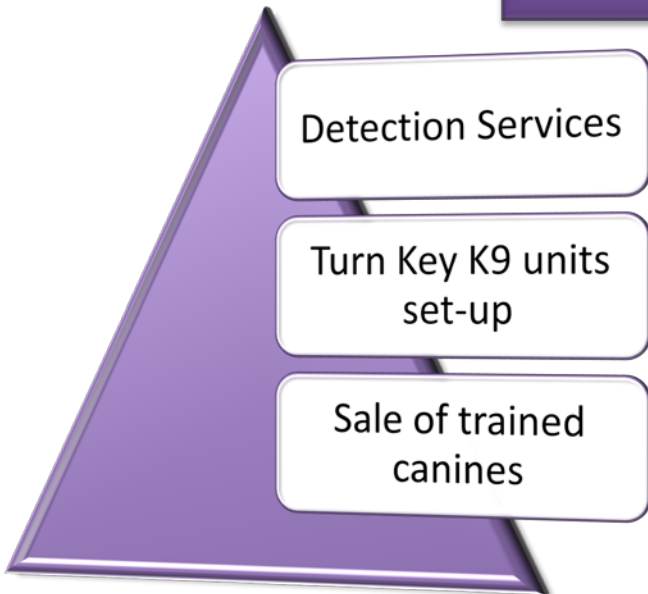

Created in order to provide a viable solution for explosive detection, DiagNose provides services at the most highly sensitive sites, which do not and cannot compromise on the security level of their infrastructure. DiagNose is the owner of a 40 Ha domain specially conceived in order to allow for the best training for dogs and handlers. This domain, as well as the instruction provided there by our trainers, each of whom has over 20 years of experience, is recognized by government authorities as an approved training center for canine teams. DiagNose is committed to quality, innovation, and customer satisfaction and accompaniment for a long-term relationship and ongoing support.

- Police and Ministry of Defense entities have approved DiagNose as a qualified vendor in various countries in the canine explosive detection domain.
- Our training center and training programs are recognized by the French Civil Aviation Authority and the government of the Marne Region, under license N° CF-05-04-26-51-01.
- The unique RASCargO system, developed and operated by DiagNose, is licensed by the French and UK governments for use in the aviation industry.
- Our clients comprise: airports, airlines, government agencies, banks, oil refineries, security companies, police forces, and private users.

“DiagNose ClassiC”

Cargo and Vehicle screening for Explosives and Drugs

With our unique training and quality assurance, the DiagNose ClassiC product will provide you with an optimal solution for merchandise and vehicle screening with high mobility, flexibility, security and cost efficiency.

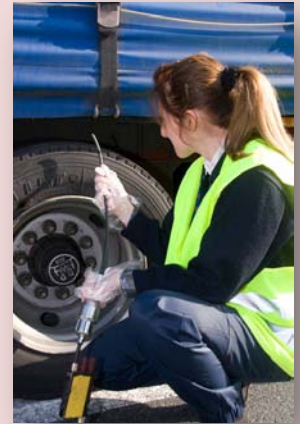

- Excellent solution for quick screening
- Effective response to dense & large items, and items that cannot go through X-ray machines
- High-throughput solutions
- Good ratio of detection to false alarms (positives and negatives)
- Attractive financial advantages due to applicable business models offered by DiagNose
- Ideal for checkpoint operations
- Used at sensitive border crossing stations
- Can be teamed with the RASCargO concept

“RASCargO”

Truck and pallet screening Solution for Explosives and Drugs

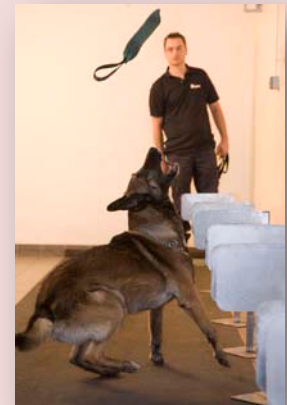

- Specially conceived for huge volumes of merchandise
- Can screen up to 40 trucks per hour
- Tested and approved by various European regulators
- Operational at various European airports, and widely used by Air France and many other airlines
- Cost-efficient thanks to our pay-per-use business model
- Decision is taken according to a matrix based on analyses of two dogs, which leads to high detection rates and low false alarms.
- Provides better security and operational efficiency.
- A tool for the user’s success.

An air sample is taken from a truck and captured on a filter

Filters are transferred to a nearby laboratory for canine analysis of multiple filters

The dog smells the filters and sits in front of a filter containing explosive or drug traces

RASCargO™ for Customs Agencies

Anti-Smuggling Solution

The RASCargO™, is the perfect solution for fighting contraband smuggling.

- Highest throughput in cargo screening up to 40 containers per hour
- Utilizes containers' idle time – no need to move containers
- Minimal process modifications
- High detection rates
- Turnkey, economical, simple implementation
- Embedded web-based process monitoring

Anti-smuggling solution covers:

- **Tobacco**
- **Drugs**
- **Illegal immigration**
- **Other prohibited substances**

“RoaDog”

Roadside IED Clearance Dogs

Roadside IEDs are a phenomenon well known to armies fighting guerillas over the course of decades. There have been innumerable cases of patrols attacked by roadside IEDs, sustaining many casualties. Dogs that can be sent for remote detection over 200 meters from their handlers are a fitting solution for this challenge. The dogs are trained to obey to commands from a distance, directing them to the area to be searched, and they will signal the presence of a roadside IED should there be one in the area. DiagNose trainers are masters in this type of unique remote command, and have trained, used, and detected IEDs through the deployment of such dogs.

DiagNose will set up your unit, with:

- Trained canines
- Training of handlers
- Equipment provision
- Procedure provision
- Ongoing support

“TopDog”

Special forces intervention dogs

The use of intervention dogs is a growing segment in the working dog community. Various experiences in operational situations have demonstrated these dogs' the ability to execute extremely complicated missions normally carried out by soldiers. For this application, which considerably reduces the risk to human life, only dogs trained by trainers who have been in combat and experienced real-life situations can be used. It is easy to teach a dog to bite, but to teach him to immobilize a terrorist under real combat and fire conditions is something only specialists can do. At DiagNose you will find the best and most experienced specialists available for this canine application.

**DiagNose will set up
your unit, with:**

- **Trained canines**
- **Training of handlers**
- **Equipment provision**
- **Procedure provision**
- **Ongoing support**
